1. GENERAL

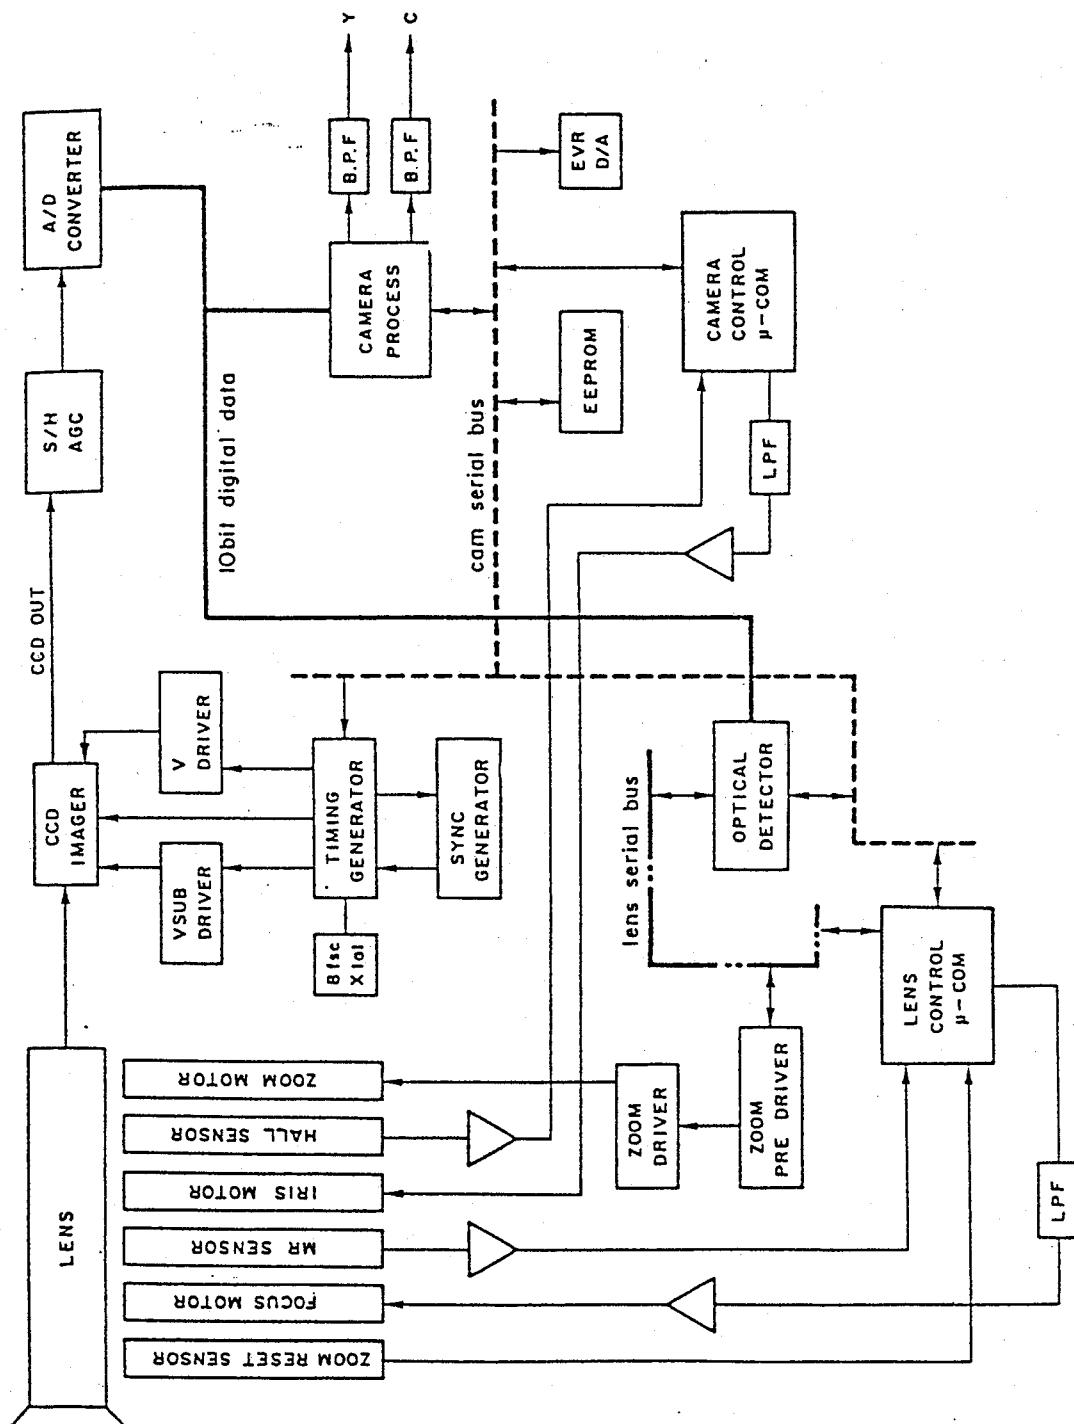

1. Summary

EVI-310 (NTSC) / EVI-311 (PAL) is a super compact color CCD camera block with 8 times zoom, high speed auto focus lens installed. A 1/3 inch, 380,000/440,000 pixels CCD is used and more than 460 TV lines, high resolution is achieved. Not only controlling zoom and focus but also auto tracing, one push, pre-set white balance are selectable and 17 steps iris, 28 speeds of electronic shutter, and 8 steps of brightness are possible to set by each. Owing to the Bright Control and Exposure Compensation function, various adjustments of brightness is offerable. Furthermore, it is possible to pre-set 6 different camera conditions in advance using Position Pre-set function. EVI-310/311 uses DSP (Digital Signal Processor) that enables digital controlling of each camera functions. Composite and Y/C outputs are available.

2. Specification

	EVI-310 (NTSC)	EVI-311 (PAL)
Image Sensor	1/3" IT CCD	
Picture Elements	768 (H) × 494 (V)	752 (H) × 582 (V)
H. Resolution (Center)	more than 460TV lines	more than 450TV lines
V. Resolution (Center)	more than 350TV lines	more than 400TV lines
Lens	8x Zoom f=5.9 to 47.2mm F1.4 Wide Macro Auto Focus (Inner Focus System)	
Angle of View (H) (V)	approx. 44.3° (wide end) to 5.8° (tele end) approx. 34.9° (wide end) to 4.4° (tele end)	
Lens constructure	9 elements in 6 groups (including 2 aspherical lenses)	
Shortest Subject Dist.	10mm (wide end) : 900mm (tele end)	
Video Out (75Ω Terminated)	Y:VS1.0Vp-p Sync negative C: Burst 0.286Vp-p VBS:1.0Vp-p Composite	Y:VS1.0Vp-p Sync negative C: Burst 0.300Vp-p VBS:1.0Vp-p Composite
Min. Illumination	6Lux F1.4 (more than 50IRE)	
S/N Ratio	more than 46dB	
White Balance	TTL Auto tracing, One push Hold, Indoor Preset, Outdoor Preset	
Electronic Shutter	28 speeds (up to 1/10000sec.)	28 speeds (up to 1/10000sec.)
Flickerless	Auto	
Operating Temperature	0°C to 50°C	
Storage Temperature	-10°C to 60°C	
Operating Humidity	30% to 80%	
Storage Humidity	20% to 90%	
Power Requirements	DC6 to 9V (2.8W)	
Dimensions(W/H/D)	49 × 51 × 100 mm	
Weight	210g	
Spurious radiation	FCC class A	
Supplied accessory	2P harness, 3P harness, 6P harness, 20P flexible cable

◇ CN102:7P For controlling zoom and focus

- | | |
|---------------|----------------|
| 1. ZOOM WIDE | JST |
| 2. ZOOM TELE | S7B-ZR-SM3A-TF |
| 3. AF ON/OFF | |
| 4. FOCUS NEAR | |
| 5. FOCUS FAR | |
| 6. GND | |
| 7. NC | |

6. Functions

EVI-310/311 offers the following functions. For the details to control each function, please refer to Section 7 and 8.

Zoom

Owing to a high speed stepping motor as a zoom motor, the fastest 1.5 sec. zooming is achieved from tele end (47.2mm max.) to wide end (5.9mm max.) with 8 times zoom. Tele/wide manual control is available.

Focus

EVI-310/311 uses Inner focus system that gives a quick and stable tracking. By detecting high frequency elements from the video signal, it focuses to the subject with much brightness and contrast in the measuring area of the center screen. Auto focus is available 1cm close-up from the lens front (in case of wide end) to infinite. The closer to be Tele side, the longer the minimum focus distance will be. When in tele end, it is focusable from 90 cm from the lens front.

For the following functions, controlling the functions with an additional circuit, ECCP, RS232C is necessary. When the following functions are not used, the first settings (factory settings) are auto white balance, 1/60 sec. shutter speed, auto iris, and AGC.

White balance

◇ Auto White Balance

TTL Auto Tracing White Balance System is used that gives a faithful color reproduction to the subject by calculating the color information of the whole screen. To prevent the subject from being all white by operating white balance function blindly, the operation range of auto white balance function is limited. This function also judges whether indoor or outdoor from the brightness and changes the withdraw range of auto white balance accordingly.

◇ Pre-set

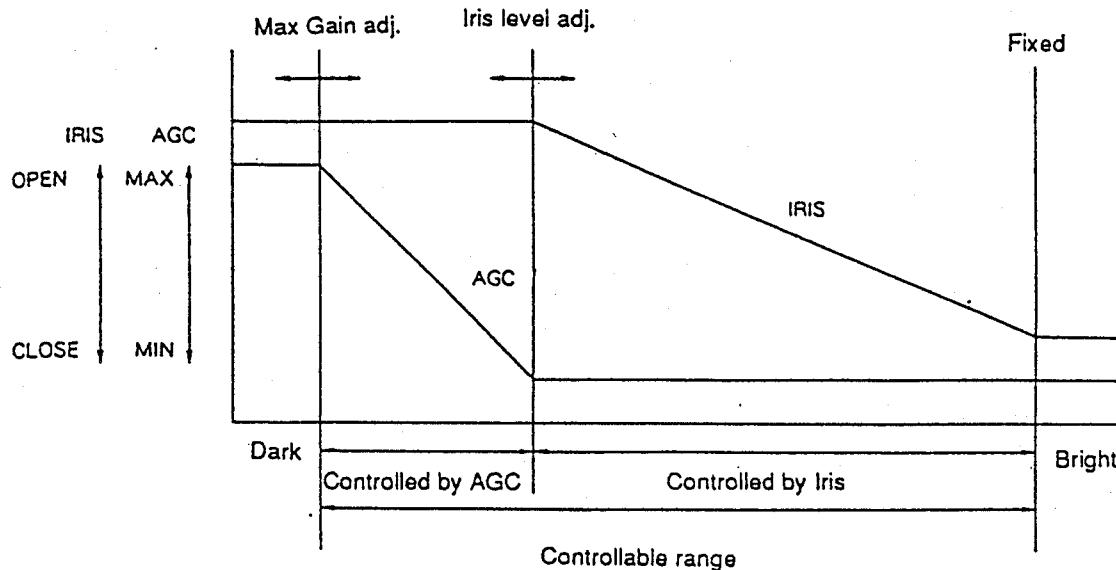

Indoor fix (3200K) and outdoor fix (5800K) are selectable.

◇ One push white balance

One push white balance function is a function to withdraw to white forcibly and capture an image under one fixed color temperature condition. Natural and faithful color is achieved without any influence from the changable conditions around the subject. When setting, send one push white balance trigger with white subject over half of the whole image occupied. The data of the one push white balance is cleared when turning off power supply. If power supply turned off once, re-set one push white balance.

Bright Control

Bright Control is an adjustment function of the brightness with the combination of gain and iris. When in darkness, gain controls exposure and when in the brightness, iris controls exposure. Since both gain and iris are fixed, this function is useful when capturing images under fixed brightness condition. The status at auto exposure will be held once when changing the mode from auto exposure to Bright Control.

STEP	GAIN	IRIS	STEP	GAIN	IRIS	STEP	GAIN	IRIS
1	18dB	F1.4	9	0dB	F2	17	0dB	F8
2	15dB	F1.4	10	0dB	F2.4	18	0dB	F9.6
3	12dB	F1.4	11	0dB	F2.8	19	0dB	F11
4	9dB	F1.4	12	0dB	F3.4	20	0dB	F14
5	6dB	F1.4	13	0dB	F4	21	0dB	F16
6	3dB	F1.4	14	0dB	F4.8	22	0dB	F19
7	0dB	F1.4	15	0dB	F5.6	23	0dB	>F22
8	0dB	F1.7	16	0dB	F6.8			

note: F number of Step 23 is larger than F22 but it doesn't become CLOSE.

Exposure compensation

Exposure Compensation function is a brighter/darker adjustment function of the brightness when in auto (auto iris, AGC). The brightness when Exposure Compensation is OFF (auto iris, AGC) is a base (step 0) and each 7 steps to brighter and darker than the base condition (step 0) are adjustable. Iris and gain are in auto mode.

Shutter priority mode

Corresponding to selected electronic shutter speed (28 speeds), iris is adjusted automatically. Gain is in auto setting.

1	1/60 (PAL:1/50)	11	1/300	21	1/1750
2	1/60	12	1/350	22	1/2000
3	1/75	13	1/425	23	1/2500
4	1/90	14	1/500	24	1/3000
5	1/100	15	1/600	25	1/3500
6	1/125 (PAL:1/120)	16	1/725	26	1/4000
7	1/150	17	1/850	27	1/6000
8	1/180	18	1/1000	28	1/10000
9	1/215	19	1/1250		
10	1/250	20	1/1500		

Auto flickerless function

EVI-310/311 has auto flickerless function which reduces flicker automatically caused under fluorescent light in the area where electric wave frequency is different from the camera. To set to complete flickerless, set shutter speed to 1/100 sec.

Iris priority mode

Corresponding to selected iris position (17 different positions), shutter speed is adjusted automatically. Gain is in auto mode.

1	F19	9	F4.8
2	F16	10	F4
3	F14	11	F3.4
4	F11	12	F2.8
5	F9.6	13	F2.4
6	F8	14	F2
7	F6.8	15	F1.7
8	F5.6	16	F1.4

Gain priority mode

Manual gain is set (8 different level). Shutter is in normal mode (1/60 : NTSC, 1/50 PAL) and iris is in auto mode.

1	-3dB
2	0dB
3	+3dB
4	+6dB
5	+9dB
6	+12dB
7	+15dB
8	+18dB

Position Pre-set

Using Position Pre-set function, 6 different camera conditions are pre-setable. With this useful function, camera is possible to be set as required instantly without adjusting zoom position, focus (auto, manual position), white balance, iris, gain, shutter speed, and bright control each time.

◇ Setting

After setting a camera functions as required, pre-set the camera to a preferable position number. When the position number is selected, each function will be set as memorized in advance. Once it is reset, the functions will be in full auto mode.

Factory Pre-set

With Position Pre-set function, the camera functions before pre-set and after reset are in full auto mode. However, with Factory Pre-set function, it is possible to keep the data semipermanently by writing the data into internal nonvolatile memory. Using this function, each camera functions before pre-set, after reset, and when turning on power supply ,when using position pre-set, are setable as desired.

Since a special tool is necessary, please contact us for the details.

7.

Function Control

Each functions are controlled by different method.
Please refer to Section 8 for the details of function controlling method.

Control method Controlable functions	FK-56	RM-95	VISCA /RS232C	ECCP	Extra Circuit
Zoom Tele/Wide	○	○	○	○

Position Preset (Detect)			○	○	

8. Operation

Operation

◇ Power Supply

Please supply DC $7.5 \pm 1.5V$ (2.8W) to CN 351 with accessory harness.
Red (No.1) is plus (+).

◇ Video Signal Output

Composite signal and YC video signal are output at CN 654.

◇ Backup Switch

- When backup switch is ON, positions of zoom and focus is memorized to the camera.
- Since backup battery is re-chargeable, exchanging is unnecessary.
- Backup lasts for two weeks when the battery is full charged.
- Factory setting is OFF.

Function Controlling

◇ FK-56 board

This board is used to control a lens. FK-56 board is removable from side frame of the camera.

■ Auto Focus ON/OFF

- Each time AF ON/OFF switch is pushed, ON/OFF is switched, and LED is lighted when Auto Focus is ON.
- When Auto Focus is OFF, the focus is adjustable by pushing Focus FAR or Focus NEAR switches. Adjustment is not available when Auto Focus is ON.

■ Zoom Adjustment

Zoom adjustment is available by pushing TELE or WIDE switches.

◇ ECCP (EVI Camera Control Protocol)

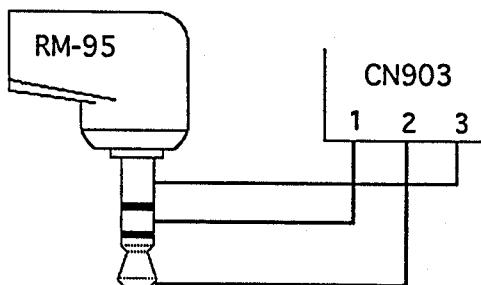

EVI-310/311 has ECCP terminals with which each camera function is controlled directly by serial communications (9600bits/sec., asynchronous interactive serial communications). It is possible to control the camera and read the camera data. To this ECCP terminals, remote controller (RM-95) and VISCA/RS 232C interface board are connectable. As to the details on ECCP usage, a contract is necessary so please contact us.

◇ VISCA / RS232C - with Interface Board/ IF-51

With Interface Board/IF-51 (extra charged optional accessory), each camera functions are controllable by RS232C port of a computer. It is possible to control a camera and read the camera data. IF-51 board can be fixed to the side of the camera body. In this case, FK-56 board has to be removed. Zoom and focus are operationable with buttons on IF-51 board. Please contact us for the details on VISCA/RS232C.

◇ Remote Controller - RM-95

With a remote controller, RM-95 for Sony consumer Camcorders, zooming and focus controlling are possible. Please connect to CN903 (3P) as below.

◇ Controlling with extra circuit

By adding a switch circuit, the following function will be controllable.
Use CN901 (20P) and accessory 20P flexible cable.

note: Please refer to the circuit diagram (page 15)

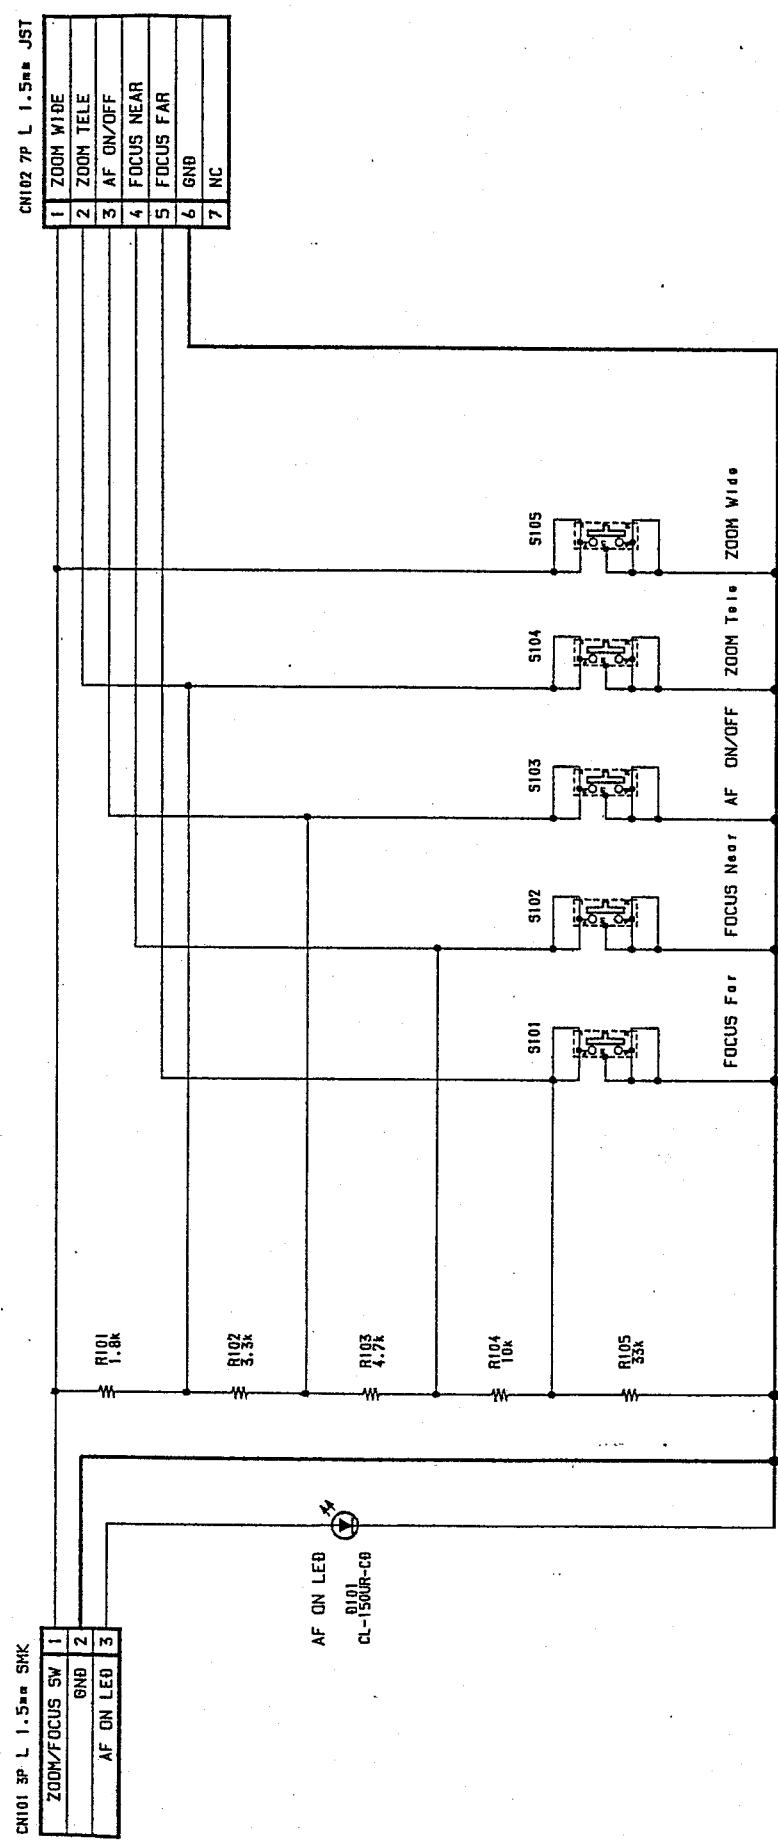

CN901:20P

- Exposure Compensation

FK-56 Board Circuit Diagram

Control By Extra Circuit — Sample Circuit Diagram

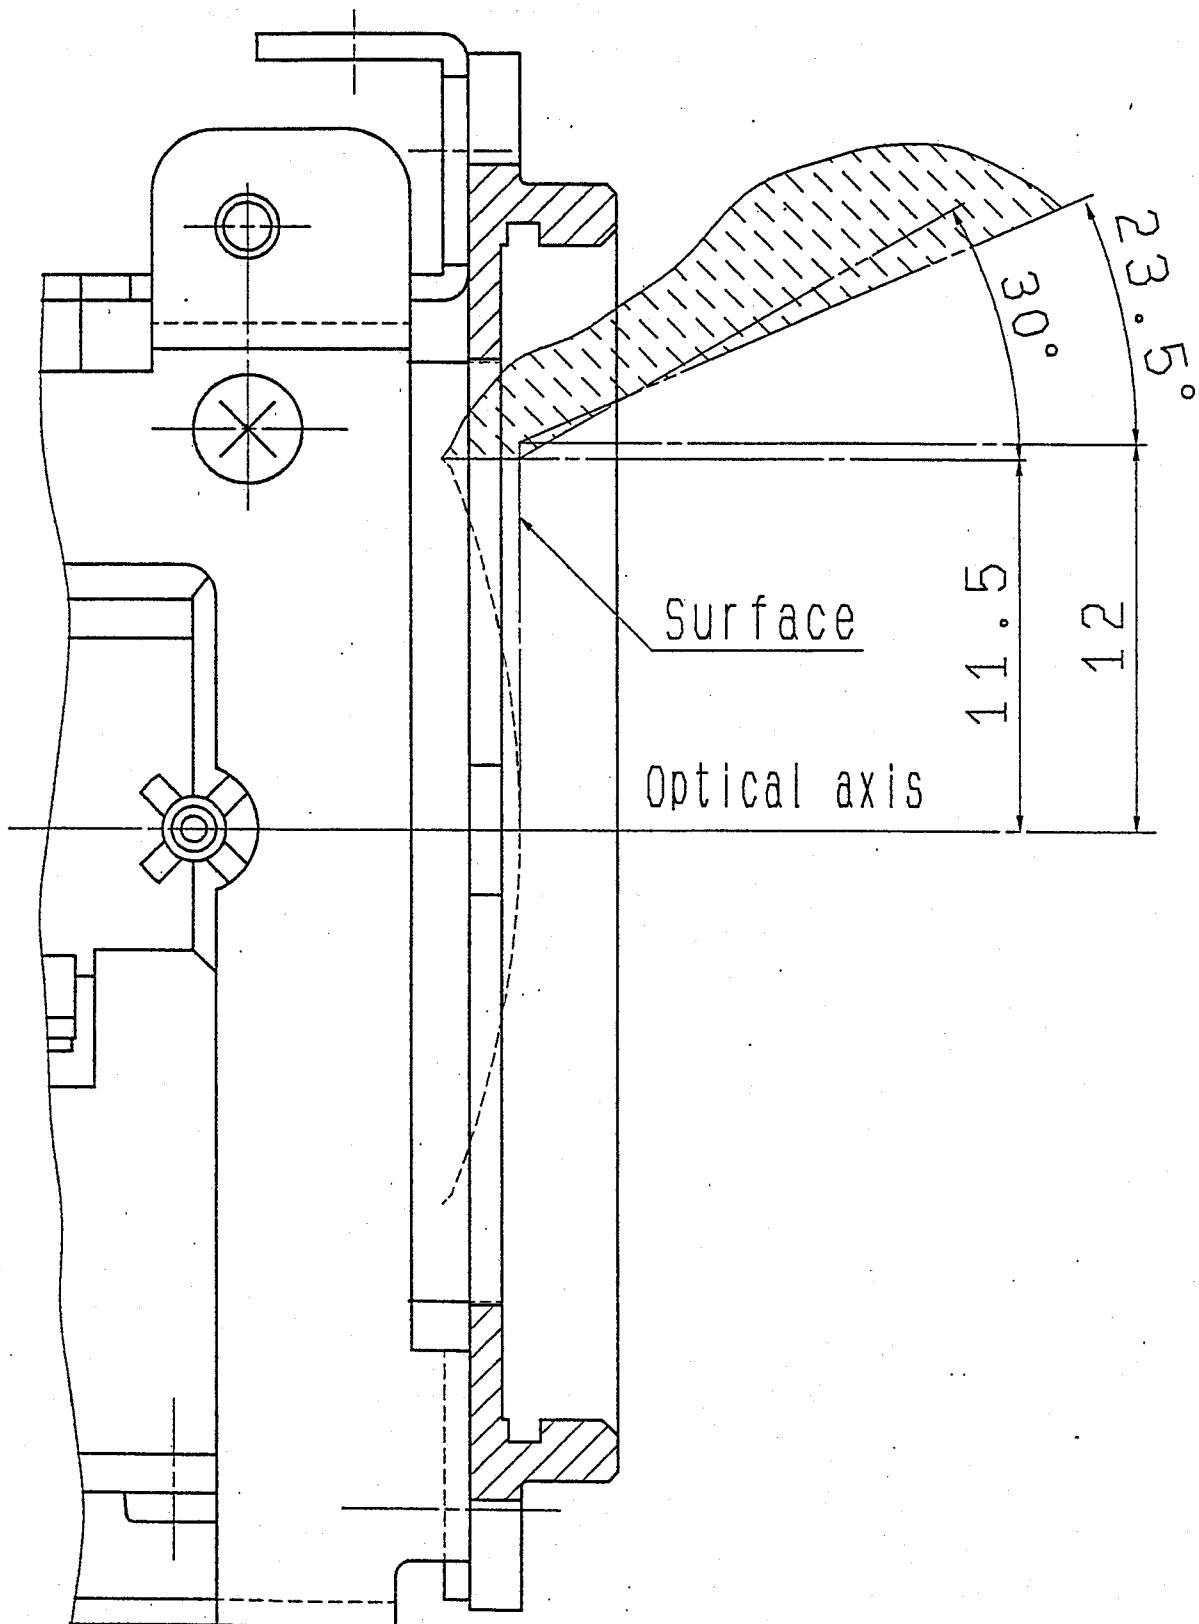

9 Installation

◇ Installation

For installation, use tripod screw below or M2 screws on chassis.

It is possible to remove the plate for tripod.

In case of designing housing etc., please refere to the following drawing.

■ 10. Note

- Do not add any force to bend printed circuit boards.
- Do not add voltage with over regular spec. (Max. 9V)
Heat will be caused when using 9V voltage but it is not abnormal.
- To prevent electrostatic discharges, please use earth band when touching the boards.
Please use unistatic processed material for packing.
- Please use a carton box shipped from Sony when you ship.
- A clatter might be heard when shaking a camera with power supply turned off.
However, this clatter is caused by vibration of linear motor inside of the lens.
No quality problem.

■ 11. Others

External synchronization is not available. RGB output is not available.

■ 12 Optional Accessory

◇ Interface Board / IF-51

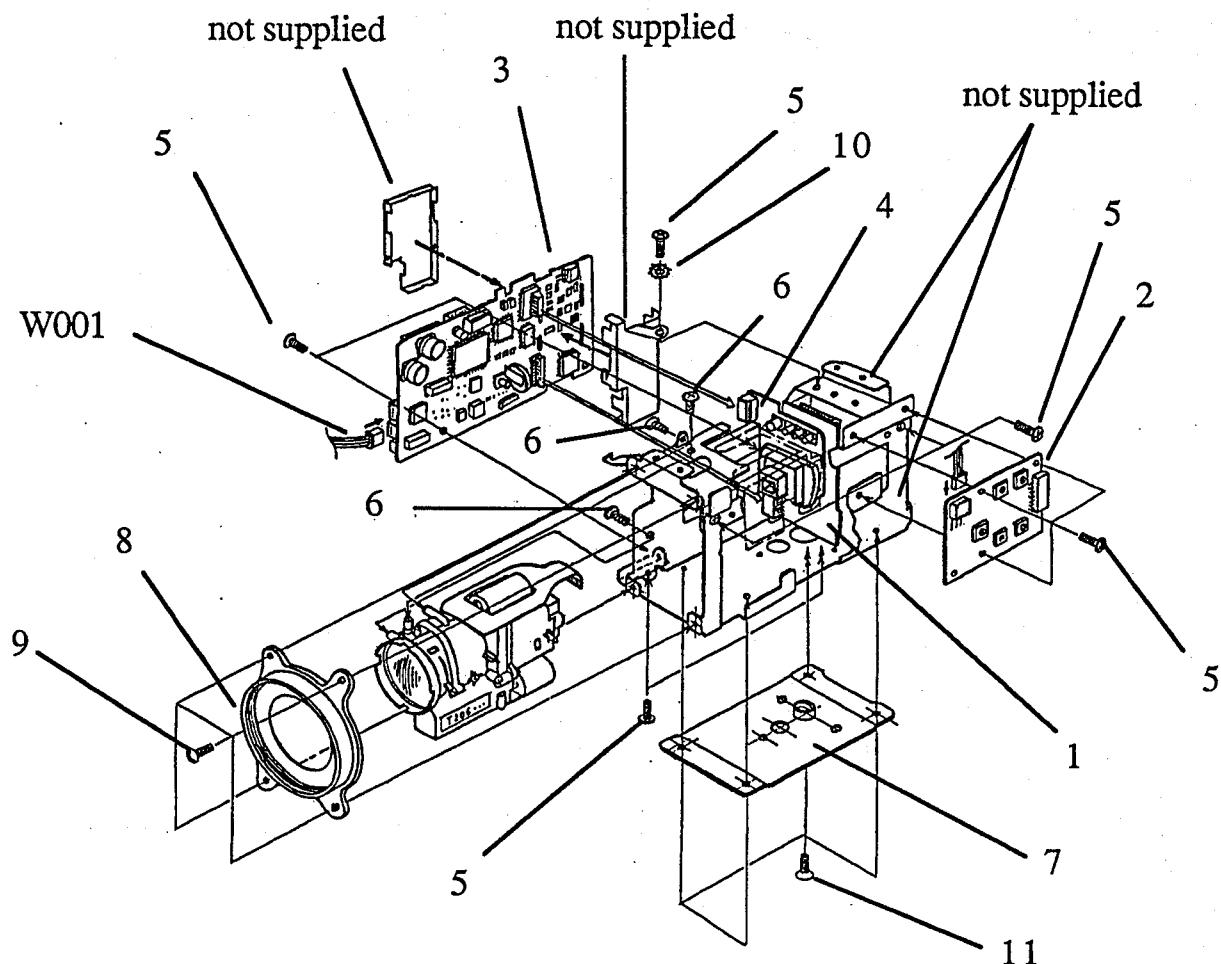

By using Interface Board/IF-51, it is possible to control camera functions through RS232C port of computers. IF-51 is possible to mount at the side of the camera. In this case, FK-56 Board should be taken off. Zoom and focus are possible to control also by the button on IF-51. Please ask for more details.

◇ Conversion lens

It is possible to adopt conversion lens ($\Phi 37$) such as wide conversion lens or close up lens of consumer Camcorder.

3. ELECTRICAL PARTSLIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX and -X mean standardized parts, so they may have some difference from the original one.
- **RESISTORS**
All resistors are in ohms.
METAL: Metal-film resistor.
METAL OXIDE: Metal oxide-film resistor.
F: nonflammable

- Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

● **SEMICONDUCTORS**

In each case, u:μ, for example:
uA .. : μA. uPA.. : μPA.

uPB.. : μPB. uPC.. : μPC. uPD.. : μPD..

● **CAPACITORS**

uF: μF

● **COILS**

uH: μH

The components identified by mark Δ or dotted line with mark Δ are critical for safety. Replace only with part number specified.

When indicating parts by reference number, please include the board.

Ref. No.	Part No.	Description	Remark
ACCESORIES & PACKING MATERIALS			

*		1-751-538-11 CABLE, FLAT (0.5MM PITCH)	
*		1-951-471-11 HARNESS (EC-51)	
*		1-951-473-11 HARNESS (DC-57)	
*		1-951-475-11 HARNESS (VO-50)	
*		3-948-061-02 COVER, Z GEAR	

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX and -X mean standardized parts, so they may have some difference from the original one.
- RESISTORS
All resistors are in ohms.
METAL: Metal-film resistor.
METAL OXIDE: Metal oxide-film resistor.
F: nonflammable

● Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

● SEMICONDUCTORS

In each case, u: μ , for example:

uA .. : μ A.. uPA.. : μ PA..

uPB.. : μ PB.. uPC.. : μ PC.. uPD.. : μ PD..

● CAPACITORS

uF: μ F

● COILS

uH: μ H

The components identified by mark Δ or dotted line with mark Δ are critical for safety. Replace only with part number specified.

When indicating parts by reference number, please include the board.

6. LIST OF SERVICE TOOLS

When performing adjustments, refer to the layout diagrams for adjustment related parts beginning from next page.

PREPARATIONS BEFORE ADJUSTMENT

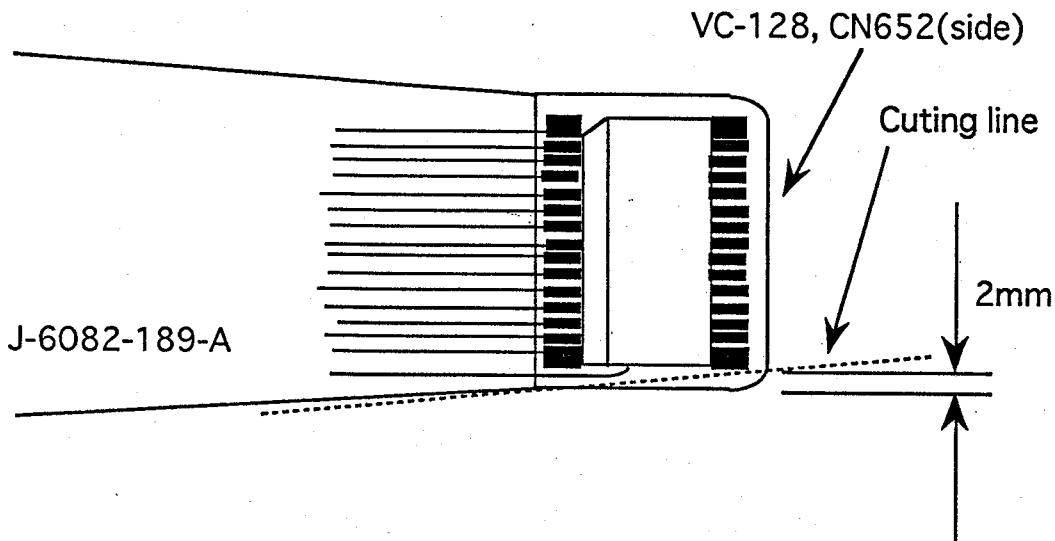

List of Service Tools

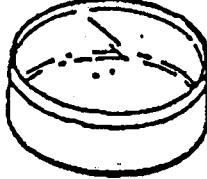

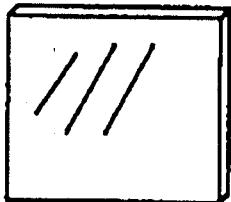

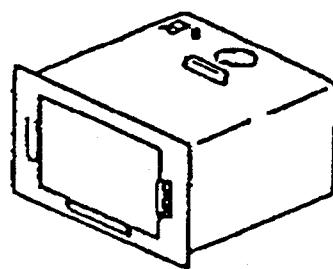

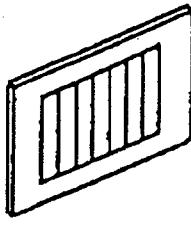

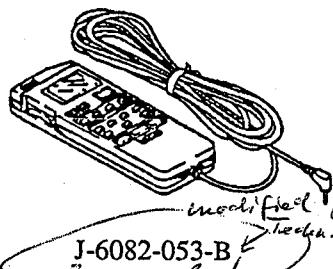

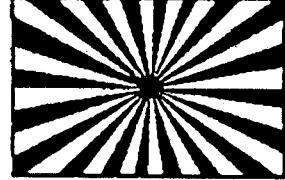

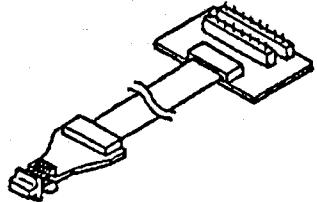

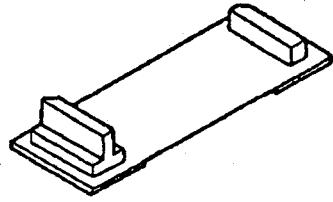

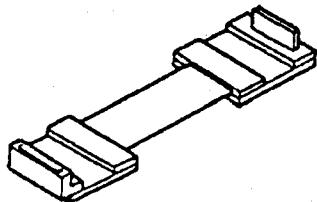

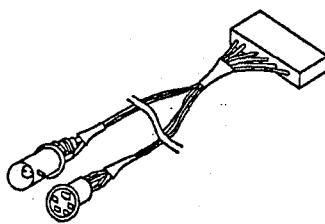

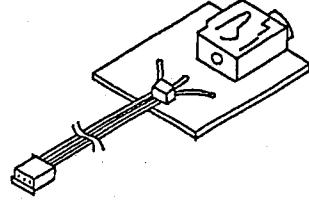

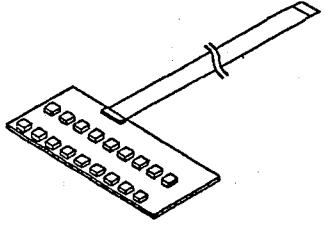

- Oscilloscope
- Regulated power supply
- Vectorscope
- Adjusting driver
- Color monitor
- Digital voltmeter

Ref. No.	Name	Parts Code	Usage
J-1	Filter for color temperature correction(C14)	J-6080-058-A	Auto white balance adjustment/check White balance adjustment/check
J-2	ND filter 1.0	J-6080-808-A	White balance check
	ND filter 0.3	J-6080-818-A	White balance check
J-3	Pattern box PTB-450	J-6082-200-A	
J-4	Color chart for pattern box	J-6020-250-A	
J-5	Adjusting remote commander ^{Note 1} (RM-95-remodeled partly)	J-6082-053-B	
J-6	Siemens star	J-6080-875-A	For checking the flange back
J-7	Measuring pin tool for camera section	J-6082-139-A	For adjusting the camera section
J-8	Extension cable(30P,0.8mm) ^{Note 2}	J-6082-189-A	For extension between the LD-62 board (CN752) and VC-128 board (CN652)
J-9	Extension cable(18P,0.8mm)	J-6082-170-A	For extension between the CD-99 board (CN721) and VC-128 board (CN601)
J-10	Video / S video out cable	J-6082-293-A	For checking the video signal
J-11	Extension cable 3	J-6082-291-A	For adjusting remote commander (J-5)
J-12	FK-57 board	J-6082-292-A	For function check

Note 1: If the processor IC in the adjusting remote commander is not the new microprocessor(UPD7503G-C56-12), the pages cannot be switched. In this case, replace with the new micro processor(8-759-148-35).

7. ADJUSTMENTS

7-1-1. Preparation

Note : When adjusting only, the lens block and VC-128 board need not be taken apart.

Connect the equipments for adjusting as follows.

Extension cable 3
for adjusting (3P)
J-6082-291-A

7-1-2. Precautions

1. Switch settings

Adjust the back up switch is OFF (VC-128 board S901) to the following positions, and adjust a, unless specified otherwise.

2. Adjusting Procedure

Adjust in the given order.

3. Subject

1) Color bar chart (Standard picture frame)

Adjust the picture frame as shown in Fig. 7-4. if adjustments are performed using the color bar chart.
(Standard picture frame)

2) White pattern (Standard picture frame)

Remove the color bar chart from the pattern box, and adjust the zoom lever so that the white pattern is the same size and at the same position as the color bar chart (Standard picture frame).

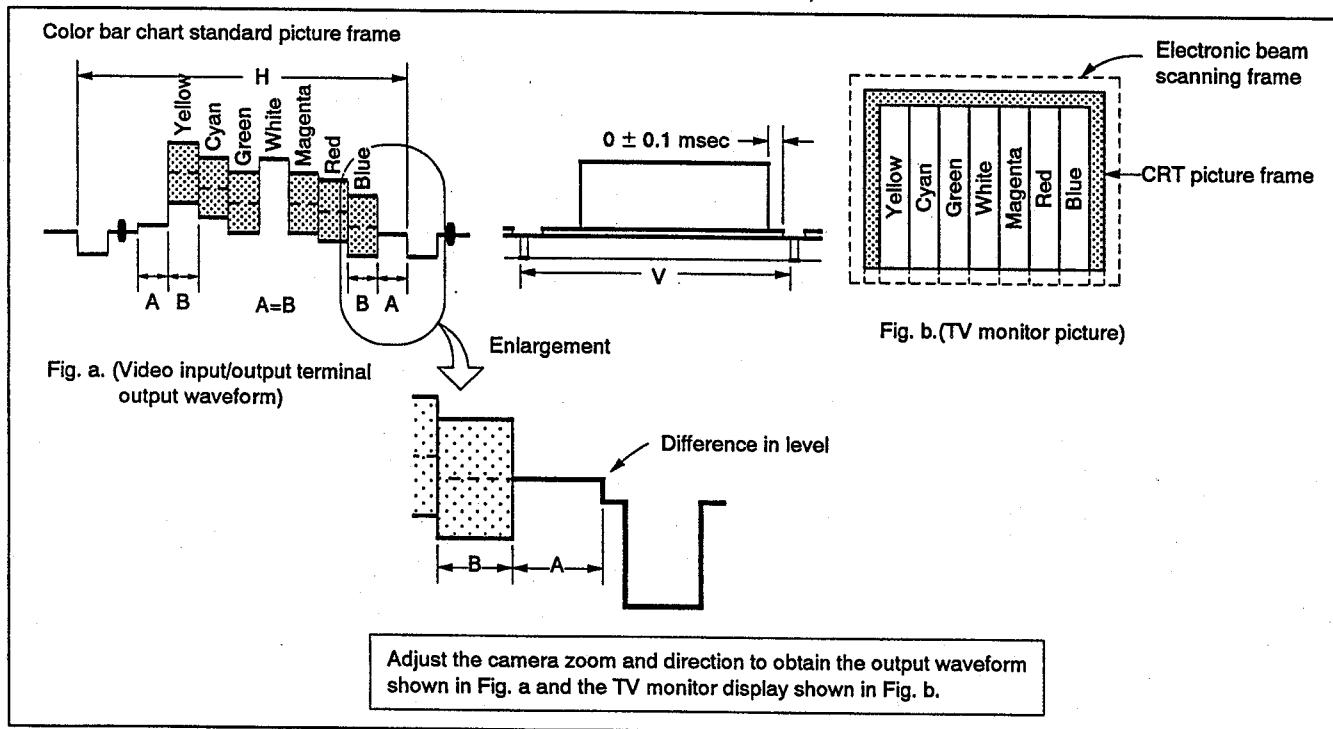

Fig. 7-4.

3) Chart for flange back adjustment

Combine a white A0 size (1189 mm × 841 mm) imitation Japanese vellum to a black one, and make the chart shown in Fig. 4-5.

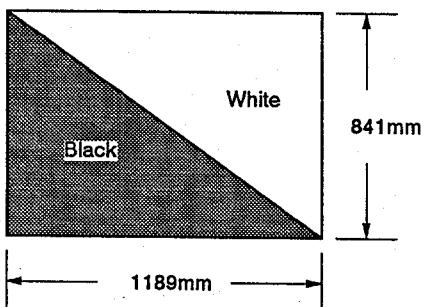

Fig. 7-5.

Note: Use non-reflecting and matted imitation Japanese vellum that are above A0. When making the chart, make sure that the line between the black and white is even.

7-1-3. Adjusting Remote Commander

Adjusted by changing the constant or coefficient of the digital signal processing calculation, or modifying the output voltage of the EVR IC (VC-128 board IC654, 905). This is controlled by the camera micro processor (VC-128 board IC653, 903), which reads the data written in the nonvolatile memory (VC-128 board IC651, 901: EEPROM), and transmits it to the digital signal processing circuit and EVR.

To perform adjustments, adjustment data written in the nonvolatile memory must be rewritten, using the adjusting remote commander.

The adjusting remote commander uses the remote commander signal line (LANC) to communicate mutually with the camera microprocessor. The page, address and the up/down commands of the data are transmitted from the adjusting remote commander to the camera micro processor. And, the page, address, and data are transmitted for the vice versa.

1. Using the adjusting remote commander

- 1) Connect the adjusting remote commander to the ECCP terminal (VC-128 board CN903).
- 2) Adjust the HOLD switch of the adjusting remote commander to "HOLD" (SERVICE position).

If it has been properly connected, the LCD on the adjusting remote commander will display as shown in Fig. 7-6.

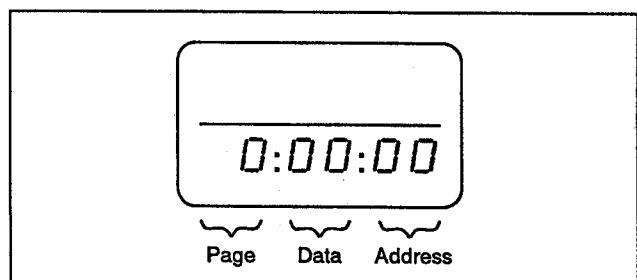

Fig. 7-6.

- 3) Operate the adjusting remote commander as follows.

- Changing the page

The page increases when the EDIT SEARCH+ button is pressed, and decreases when the EDIT SEARCH- button is pressed. There are altogether 16 pages, from 0 to F.

Hexadecimal notation	0 1 2 3 4 5 6 7 8 9 A B C D E F
LCD Display	0 1 2 3 4 5 6 7 8 9 A b c d E F
Decimal notation conversion value	0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15

Table 7-1.

- Changing the address

The address increases when the FF (►►) button is pressed, and decreases when the REW (◀◀) button is pressed. There are altogether 256 addresses, from 00 to FF.

- Changing the data (Data setting)

The data increases when the PLAY (►) button is pressed, and decreases when the STOP (■) button is pressed.

There are altogether 256 data, from 00 to FF.

- Writing the adjustment data

The PAUSE button must be pressed to write the adjustment data (F page) in the nonvolatile memory.
(The new adjustment data will not be recorded in the nonvolatile memory if this step is not performed.)

- 4) Select page:6, address:00, and set the data to 01. The write protect of page F will be released. (Addresses:01 to DF on page F.)
Select page:1, address:00, and set the data to 01. The write protect of page D will be released.
The adjustment can now be performed.
- 5) After completing all adjustments, turn off the main power supply (6.3V) once. This releases the adjustment mode (other than page F).

2. Precautions upon using the adjusting remote commander

Mishandling of the adjusting remote commander may erase the correct adjustment data at times. To prevent this, it is recommended that all adjustment data be noted down before beginning adjustments and new adjustment data after each adjustment.

7-1-4. Page F Address List

- Note 1:** The data already listed in the adjustment data memo column are fixed values.
- Note 2:** The adjustment data initial values are values just after executing "Page F Data Initialization" and "Page F Data Modification". They are different from the values after executing all adjustments.
- Note 3:** The < > contains the initial data for AF micro processor versions 1 and 2. Refer to "Page F Data Input" for how to distinguish these versions.

Note 4: The () contains the initial data for camera microprocessor versions 1 and 2. Refer to "F Page Data Modifications" for how to distinguish these versions.

Note 5: In some cases, data have been input to the page F addresses D0 to EF. This has no relation to the adjustments.

7-1-6. Page 6, Page 2 Address List

The camera adjustment mode can be set by setting the data in the following table to page 6 or 2. (The data of these pages can be set temporarily. When the main power supply (6.3V) is turned off, the original values (normal value) are returned. Therefore, these adjustment modes can be released easily by turning off the main power supply.)

1. Page 6

Address	Adjustment Mode	Data	Function
00	Page F protect	00 01	Normal (Protect released) Protect release of address 01 to DF of Page F
01	Camera adjustment switch Note: To execute this address adjustment mode, it is necessary to press the PAUSE button of the adjusting remote commander after setting the data.	00 01 03 05 07 09 0B 0D 0F 11 13 15 17 19 2F	Normal IRIS OPEN, AGC HOLD IRIS CLOSE1, AGC HOLD IRIS CLOSE2, AGC MIN IRIS CLOSE3, AGC MAX ND0.5 SHUTTER (PAL=1/160, NTSC=1/190) ND0.8 SHUTTER (PAL=1/320, NTSC=1/380) AWB PRESET1: 3200K PRESET DATA input WB 3200K PRESET: Indoor white balance mode AWB PRESET2: 3200K PRESET DATA input preparations Flange back adjustment preparations Flange back adjustment execution 1/2000 shutter mode MAX GAIN adjustment mode EEPROM PRE WRITE: Page F, page E initial data writing

(Example) By setting data: 01 to page: 6, address: 00, the write protect of page F, addresses 01 to DF can be released.

Table 7-3.

2. Page 2

Category	Address	Adjustment Mode	Data	Function
01	37	VH address L		Title horizontal/vertical position (L)
01	38	VH address H		Title horizontal/vertical position (H)
01	39	Data transmission to SG	00 01	Normal Data transmission to SG begins

Note: The category is specified by the data of page 2, address 00.

(Example) To specify category 01, adjust to 01 the data of page 2, address 00.

Table 7-4.

7-1-7. Adjustment Connector.

Most of the measuring points for the camera section adjustment are concentrated at CN651 of the VC-128 board. Connect the oscilloscope, etc. via the measuring pin tool (J-6082-139-A). The following table lists the pin numbers and the signal names of CN651.

Pin No.	Signal Name	Pin No.	Signal Name
1	D5V	2	ECCP SIG
3	ZOOM SW	4	CAM SI
5	CS EEPROM	6	CAM SO
7	LI 3V	8	CAM SCK
9	CS CORE	10	GND
11	ECCP DC	12	VIDEO GND
13	V SUB CHK	14	C OUT
15	PG CONT	16	GND
17	VIDEO OUT	18	Y OUT

Table 7-5.

7-1-8. Data Processing

For some adjustments, the display data of the adjusting remote commander (hexadecimal numeral) must be calculated in order to obtain the adjustment data. In this case, after converting the hexadecimal numeral to a decimals numeral once, calculate and convert the result to a hexadecimal numeral, and use it as the adjustment data. Table 7-6 is the hexadecimal-decimal calculation table.

Hexadecimal-Decimal Conversion Table

The lower digits of the hexadecimal The upper digits of the hexadecimal	0	1	2	3	4	5	6	7	8	9	A (A)	B (B)	C (C)	D (D)	E (E)	F (F)
0	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
1	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31

Note: () contains the display of the adjusting remote commander.

(Example) When the DDS display or the display of adjusting remote commander is BD (b d).

As the upper digit of the hexadecimal numeral is B (b), and the lower digit is D (d), the meeting point "189" of ① and ② in the above table is the decimal numeral to be calculated.

Table 7-7.

7-2. CAMERA SYSTEM ADJUSTMENTS

1. Adjusting points when replacing main parts

When replacing the CCD imager or lens block, adjust the items indicated by in the following table.

	When CCD imager is replaced	When lens block is replaced
V SUB adjustment	<input type="circle"/>	
V RG adjustment	<input type="circle"/>	
HALL adjustment		<input type="circle"/>
CCD imager correction data writing	<input type="circle"/>	
Flange back adjustment	<input type="circle"/>	<input type="circle"/>
IRIS IN/OUT adjustment	<input type="circle"/>	<input type="circle"/>
MAX GAIN adjustment	<input type="circle"/>	
Pre-white balance adjustment	<input type="circle"/>	
Auto white balance balance reference data input	<input type="circle"/>	
Auto white balance adjustment	<input type="circle"/>	
Color reproducitvity adjustment	<input type="circle"/>	
Linear matrix adjustment	<input type="circle"/>	

2. Power supply voltage check (VC-128 board)

Subject	Arbitrary
Measuring instrument	Digital voltmeter
D5V check	
Measurement point	CL360 or L667
Specified value	4.90 ± 0.15 Vdc
D4V check	
Measurement point	CL361 or L663
Specified value	3.95 ± 0.15 Vdc
CAM 5V check	
Measurement point	CL359 or L666
Specified value	4.85 ± 0.15 Vdc
MT 5.0V check	
Measurement point	CL353
Specified value	5.0 ± 0.5 Vdc
15V check	
Measurement point	CL355 or L664
Specified value	15.0 ± 0.4 Vdc
-8.5V check	
Measurement point	CL356 or L665
Specified value	-8.5 ± 0.5 Vdc

Checking Method:

- 1) Check that each power supply voltage satisfies the specified value.
If not, refer to "Video circuit, Power supply block adjustment".

3. Page F data modification

Some parts of the data (initial data) automatically written on page F by the initialization of the page F data will differ according to the version of the camera micro processor. Change the data manually, and arrange it.

Modification method:

Order	Page	Address	Data	Procedure	Conditions
1	6	00	01	Releasing of page F protect.	
2	F	00(SET ID)	3F	Set each data to each address, and press the PAUSE button.	
		0C(LOWLIGHT START)	6A		
		71(AE REFH)	1B		
		A3(MF SPEED)	48		

Remarks: The versions of the camera micro processor (VC-128 board IC653) and the AF micro processor (LD-62 board IC751) mode micro processor (VC-128 board IC903) can be distinguished using the following table.

- Camera Micro processor

Page	Address	Data	
6	10	10	Version 1

- AF Micro processor

Page	Address	Data	
6	20	14	Version 1
		10	Version 2

- Mode Micro processor

Page	Address	Data	
1	01	00	Version 1
		20	Version 2

Note: Check that camera micro processor version 1 and AF micro processor version 2 mode micro processor version 2 have been provided as micro processors for correction.

**4. 28 MHz origin oscillation adjustment
(VC-128 board)**

Subject	Not required
Measurement Point	JL651 (side B)
Measuring Instrument	Frequency counter
Adjusting Element	CT601
Specified Value	14318181 ± 71 Hz

Adjusting method:

Order	Adjusting element	Procedure	Conditions
1	CT601	Adjust the oscillation frequency to the	

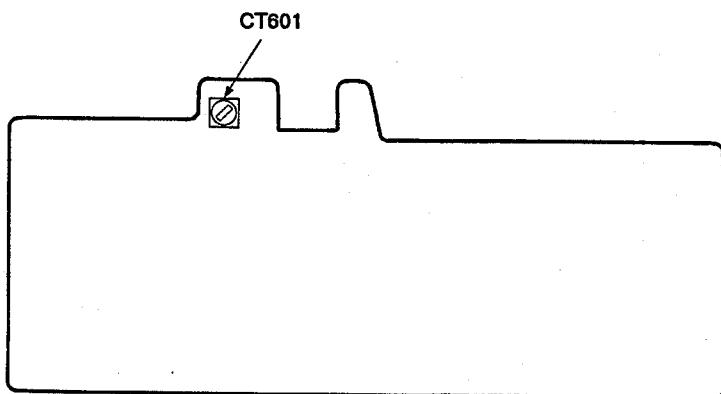

Fig. 7-7.

76

5. V SUB adjustment (VC-128 board)

Subject	Not required
Measurement Point	Pin ⑬ of CN651 (V SUB CHK)
Measuring Instrument	Digital Voltmeter
Adjustment Page	F
Adjustment Address	06 (V SUB)
Specified Value	(Imager displayed voltage) ± 0.1 Vdc

Adjusting method:

Order	Page	Address	Data	Procedure	Conditions
1	6	00	01	Releasing of protect.	
2	F	06		Change the data with the PLAY and STOP buttons, and adjust the voltage of Pin ⑬ of CN651 to the specified value.	
3	F	06		Press the PAUSE button.	

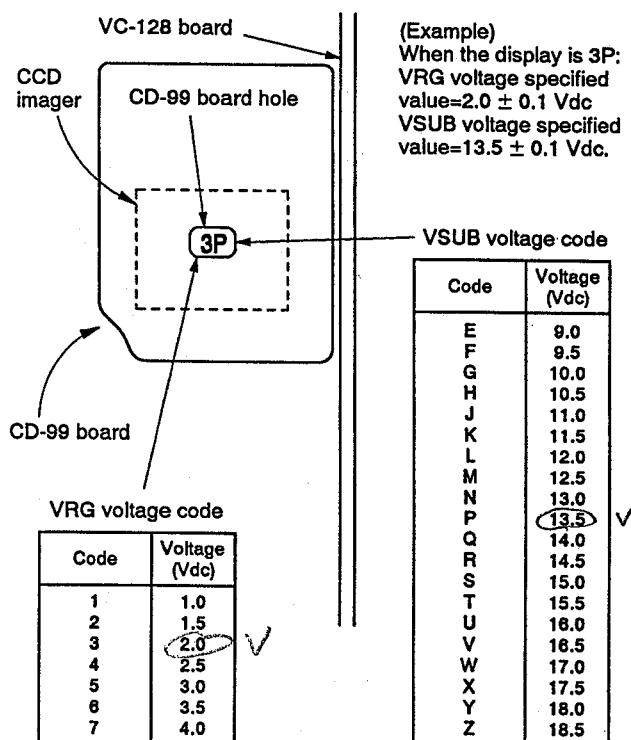

Fig. 7-8.

Related Adjustments:

"MAX GAIN adjustment", "Pre-white balance adjustment", "Auto white balance data input", "Auto white balance adjustment", "Color reproducibility adjustment", "Linear matrix adjustment".

6. VRG adjustment (VC-128 board)

Subject	Not required
Measurement Point	Pin ⑯ of CN651 (PG CONT)
Measuring Instrument	Digital Voltmeter
Adjustment Page	F
Adjustment Address	07 (VRG)
Specified Value	(Imager displayed voltage) ± 0.1 Vdc

Adjusting method:

Order	Page	Address	Data	Procedure	Conditions
1	6	00	01	Releasing of protect.	
2	F	07		Change the data with the PLAY and STOP buttons, and adjust the voltage of Pin ⑯ of CN651 to the specified value.	
3	F	07		Press the PAUSE button.	

7. CCD imager correction data writing

Subject	Not required
Adjustment Page	F
Adjustment Address	1F to 2E (CCD-DEFECT)

Write the CCD imager correction data in the following cases.

1. When the CCD imager has been replaced
2. When the camera EEPROM (VC-128 board IC651) has been replaced
3. When the page F data has been initialized

In the case of 1, as the CCD imager for repair does not require the correction data, adjust the data of addresses 1D to 2C of page F and those of addresses E0 to EF of page D to "00".

Writing method:

Order	Page	Address	Data	Procedure	Conditions
1	6	00	01	Releasing of page F protect.	
2	F	1F~2E		Set data 00 to each address, and press the PAUSE button.	
3	1	00	01	Releasing of page D protect.	
4	D	E0~EF		Set data 00 to each address, and press the PAUSE button. (Writing the backup data)	

In the case of 2 and 3, read the CCD imager correction data written on addresses E0 to EF in page D and write them in addresses 1F to 2E.

Writing method:

Order	Page	Address	Data	Procedure	Conditions
1	6	00	01	Releasing of page F protect.	
2	D	E0~EF		Read the CCD imager correction data.	
3	F	1F		Set the data of address E0 of page D, and press the PAUSE button.	
		20		Set the data of address E1 of page D, and press the PAUSE button.	
		21		Set the data of address E2 of page D, and press the PAUSE button.	
		:		⋮	
		2E		Set the data of address EF of page D, and press the PAUSE button.	

8. HALL adjustment

Subject	Not required
Measurement Point	Lower 2 digits of the data of the page A displayed
Measuring Instrument	
Adjustment Page	F
Adjustment Address	0A (HALL GAIN) 0B (HALL OFFSET)
Specified Value	33 to 37 during IRIS OPEN B8 to BC during IRIS CLOSE

For IRIS

Adjusting method:

Order	Page	Address	Data	Procedure	Conditions
1	6	00	01	Releasing of protect.	
2	6	02	03	Set the HALL DATA display mode.	
3	6 F	01	03	Press the PAUSE button. (Setting the IRIS CLOSE mode)	
4	F 6	0B	80	Press the PAUSE button. (HALL OFFSET data initial setting)	
5	F	0A	40	Read the page A display data (Note 1) and take it as W2.	IRIS CLOSE mode
6	F	0A	30	Read the page A display data and take it as W1.	IRIS CLOSE mode
7	F	01	01	Press the PAUSE button. (Setting the IRIS OPEN mode)	
8	F	0A	30	Read the page A display data and take it as K1.	IRIS OPEN mode
9	F	0A	40	Read the page A display data and take it as K2.	IRIS OPEN mode
10				Convert W1, W2, K1, K2 to decimal numerals, and obtain W1', W2', K1', K2'. (Refer to Table 7-7. "Hexadecimal-Decimal Conversion Table")	
11				Calculate X1' using the following equations (Decimal calculation). A'=W2'+K1'-W1'-K2' Equation 1 B'=W1'-K1' Equation 2 $X1' = \frac{2128 + (48 + A') - (16 \times B')}{A}$ Equation 3	
12				Convert X1' to a hexadecimal numeral, and obtain X1. (Round off to a whole number)	
13	F	0A		Set the data to X1 (obtained at step 12).	
14	F	0A		Press the PAUSE button.	
15	F	0B		Change the data with the PLAY and STOP buttons, and adjust the DDS display data to 35.	IRIS OPEN mode
16	6	0B		Press the PAUSE button.	
17	6	01	03	Press the PAUSE button. (Setting the IRIS CLOSE mode)	
18				If the page A display data is B8 to BC, it indicates the end of adjustments. Perform "Processing after Adjustments". If not, carry out step 19 onwards with the page A display data as W0.	IRIS CLOSE mode

Order	Page	Address	Data	Procedure	Conditions
19				Convert W0 to a decimal numeral, and obtain W0'.	
20				Calculate X2' using the following equations (decimal numeral calculation). $C' = W0' - B' - 53 \dots \dots \dots \text{Equation 4}$ $X2' = \frac{(133 - B') \times (X1' - 48) + 48 \times C'}{C'} \dots \text{Equation 5}$ (X1' and B' are values obtained from equations 2 and 3 at step 11)	
21				Convert X2' to a hexadecimal numeral, and obtain X2. (Round off to a whole number)	
22	F	0A		Set the data to X2 (obtained at step 21).	
23	F	0A		Press the PAUSE button.	
24	F	0B		Change the data with the PLAY and STOP buttons, and adjust the page A display data to BA.	IRIS CLOSE mode
25	F	0B		Press the PAUSE button.	
26	6	01	01	Press the PAUSE button. (Setting the IRIS OPEN mode)	
27				Check that the page A display data is 33 to 37.	IRIS OPEN mode

Processing after Adjustments:

Order	Page	Address	Data	Procedure	Conditions
1	6	02	00	Releasing of HALL DATA display mode.	
2	6	01	00	Press the PAUSE button. (Releasing the IRIS CLOSE/OPEN mode)	

Related Adjustments:
"IRIS IN/OUT adjustment".

9. Flange back adjustment

Subject	Chart for flange back adjustment Placed 2000 ± 5 mm in front of the lens Illuminance: 300 ± 50 lux)
Measurement Point	Check the operations on the TV monitor
Measuring Instrument	
Adjustment Page	F

Adjustment Address	9D (OFF FC), 9E (OFF FC), 9F (LENS WIDE), A0 (LENS WIDE), A1 (LENS TELE), A2 (LENS TELE), A9 (Z PHASE)
--------------------	--

Adjusting method:

Order	Page	Address	Data	Procedure	Conditions
1	6	00	01	Releasing of protect.	
2	F	9D	00	Set the initial data, and press the PAUSE button.	
		9E	2C		
		9F	00		
		A0	01		
		A1	E0		
		A2	02		
		A9	08		
3				Check that the center of the flange back adjustment chart coincides with that of the exposure display at both the zoom lens TELE end and the WIDE end.	
4	6	21		Check that the data is 00. (Flange back adjustable display)	
5	6	01	13	Press the PAUSE button.	
6	6	01	15	Press the PAUSE button. This enables adjustments to be carried out automatically. Adjustments are performed at the zoom lens TELE end first, and then at the WIDE end. The adjustment data is automatically input to page: F, addresses: 9D to A2, A9.)	
7	6	21		Check that the data is 01. (Display indicating that flange back adjustment has completed.)	

Write the data of addresses 9F to A2 on page F onto addresses 56 to 59 on page D. (If this step is not performed, errors will occur in the zoom/focus operation during the position preset function operation.)

Processing after Adjustments:

Order	Procedure
1	Turn on the main power supply (6.3V). (Out of focus if this is not carried out.)

10. Flange back check

Subject	Siemens star (Placed 2m in front of the lens)		
Measurement Point	Data of page A displayed		
Measuring Instrument			
Specified Value	$X-Y = \pm 0123$		

Checking method:

Order	Page	Address	Data	Procedure	Conditions
1				Place the Siemens star 2m in front of the lens.	
2				Adjust the auto lock switch to "Off".	
3				Adjust the "Brightness" to "Manual", rotate the "Brightness" adjusting dial to + so that the IRIS opens.	FK-57 board S151, S152
4				Adjust the luminance intensity for the Siemens star so that the optimum image is obtained.	
5				Expose the Siemens star at the TELE end.	
6				Press the "Focus" button, and turn on the auto focus.	
7	6	02	0C	Check that the page A display is 00 0001. (Focusing check)	Auto focus on
8				Press the "Focus" button and turn off the auto focus.	
9				Expose the Siemens star at the WIDE end.	
10	6	00	01	Releasing of protect.	
11	6	02	00		
12	F	02	B8	Press the PAUSE button. (Setting the focus position display mode)	
13				Read the page A display data and take it as X. (Example) DDS display...63 4500 $X=6345$	Zoom WIDE end Auto focus off
14				Press the "Focus" button, and turn on the auto focus.	
15	6	02	0C	Check that the page A display is 00 0001. (Focusing check)	Auto focus on
16	6	02	00	Read the page A display (focus position display) data and take it as Y. (Example) DDS display...63 5B00 $Y=635B$	Zoom WIDE end Auto focus on Focusing condition
17				Check that $X-Y = \pm 0123$. ($X'-Y' = \pm 291$ when converted to a decimal numeral)	

Processing after Checking:

Order	Page	Address	Data	Procedure
1	F	02	00	Press the PAUSE button. (Releasing the focus position display mode)

11. SYNC level adjustment (S Video) (VC-128 board)

Subject	Not required
Measurement Point	Pin ④ of CN654
Measuring Instrument	Oscilloscope
Adjustment Page	F
Adjustment Address	08 (VREF-Y)
Specified Value	A=286 ± 10 mV (NTSC) A=300 ± 10 mV (PAL)

Adjusting method:

Order	Page	Address	Data	Procedure	Conditions
1	6	00	01	Releasing of protect.	
2	6	01	03	Press the PAUSE button. (Setting the IRIS CLOSE mode)	
3	F	08		Change the data with the PLAY and STOP buttons, and adjust the SYNC level to the specified value.	IRIS CLOSE mode Terminate at 75Ω
4	F	08		Press the PAUSE button.	

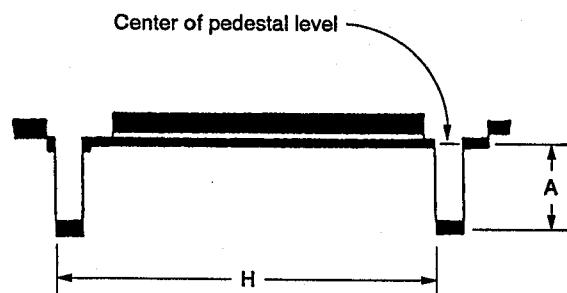

Fig. 7-9.

Processing after Adjustments:

Order	Page	Address	Data	Procedure	Conditions
1	6	01	00	Press the PAUSE button. (Releasing the IRIS CLOSE mode)	

12. Burst level adjustment (S Video) (VC-128 board)

Subject	Not required
Measurement Point	Pin ② of CN654
Measuring Instrument	Oscilloscope
Adjustment Page	F
Adjustment Address	09 (VREF-C)
Specified Value	A=286 ± 10 mVp-p (NTSC) A=300 ± 10 mVp-p (PAL)

Adjusting method:

Order	Page	Address	Data	Procedure	Conditions
1	6	00	01	Releasing of protect.	
2	6	01	03	Press the PAUSE button (Setting the IRIS CLOSE mode)	
3	F	09		Change the data with the PLAY and STOP buttons, and adjust the burst level to the specified value.	IRIS CLOSE mode Terminate at 75Ω
4	F	09		Press the PAUSE button.	

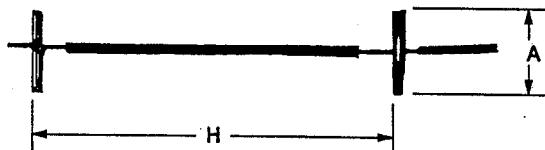

Fig. 7-10.

Processing after Adjustments:

Order	Page	Address	Data	Procedure	Conditions
1	6	01	00	Press the PAUSE button. (Releasing the IRIS CLOSE mode)	

Related Adjustments:

"Color reproducitvity adjustment".

13. SYNC level adjustment (Composite) (VC-128 board)

Note: Perform steps 11 and 12 after the adjustment.

Subject	Not required		
Measurement Point	Pin ⑥ of CN654 (VIDEO OUT)		
Measuring Instrument	Oscilloscope		
Adjustment Page	D		
Adjustment Address	OC (Y/C MIX Y)		
Specified Value	A=286 ± 10 mV (NTSC) A=300 ± 10 mV (PAL)		

Adjusting method:

Order	Page	Address	Data	Procedure	Conditions
1	1	00	01	Releasing of protect. (page D)	
2	6	01	03	Press the PAUSE button. (Setting the IRIS CLOSE mode)	
3	D	0C		Change the data with the PLAY and STOP buttons, and adjust the SYNC level to the specified value.	IRIS CLOSE mode Terminate at 75Ω
4	D	0C		Press the PAUSE button.	

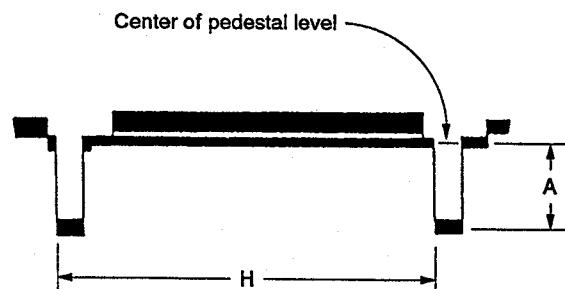

Fig. 7-13.

Processing after Adjustments:

Order	Page	Address	Data	Procedure	Conditions
1	6	01	00	Press the PAUSE button. (Releasing the IRIS CLOSE mode)	

14. Burst level adjustment (Composite) (VC-128 board)

Note: Perform steps 11 and 12 after the adjustment.

Subject	Not required
Measurement Point	Pin ⑥ of CN654
Measuring Instrument	Oscilloscope
Adjustment Page	F
Adjustment Address	0D (Y/C MIX C)
Specified Value	A=286 ± 10 mVp-p (NTSC) A=300 ± 10 mVp-p (PAL)

Adjusting method:

Order	Page	Address	Data	Procedure	Conditions
1	1	00	01	Releasing of protect.	
2	6	01	03	Press the PAUSE button (Setting the IRIS CLOSE mode)	
3	D	0D		Change the data with the PLAY and STOP buttons, and adjust the burst level to the specified value.	IRIS CLOSE mode Terminate at 75Ω
4	D	0D		Press the PAUSE button.	

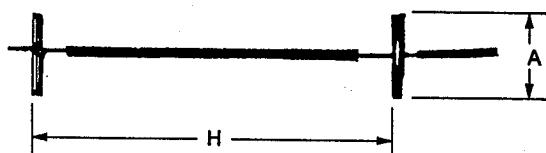

Fig. 7-14.

Processing after Adjustments:

Order	Page	Address	Data	Procedure	Conditions
1	6	01	00	Press the PAUSE button. (Releasing the IRIS CLOSE mode)	

Related Adjustments:

"Color reproducitvity adjustment".

15. Picture frame setting

Subject	Color bar chart standard picture frame
Measurement Point	Video output terminal
Measuring Instrument	Oscilloscope and TV monitor.
Specified Value	$A=B, C=D, t=0 \pm 0.1 \text{ msec.}$

Setting method:

Order	Procedure
1	Turn off the auto focus.
2	Adjust the focus using the focus knob.
3	Adjust the direction of the zoom and camera, and set at the specified position.
4	Mark the position of the picture frame on the monitor display, and adjust it to this position if the "color bar chart standard picture frame" or "white pattern standard picture frame" is used in the following adjustments.

Checking on the TV monitor (Under scan mode)

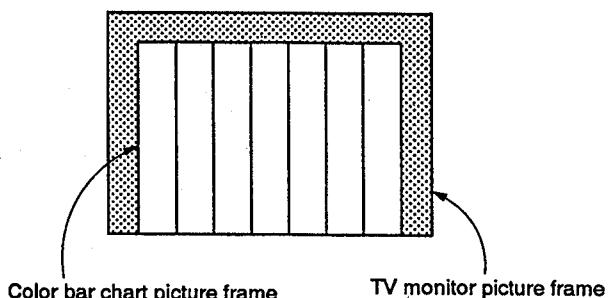

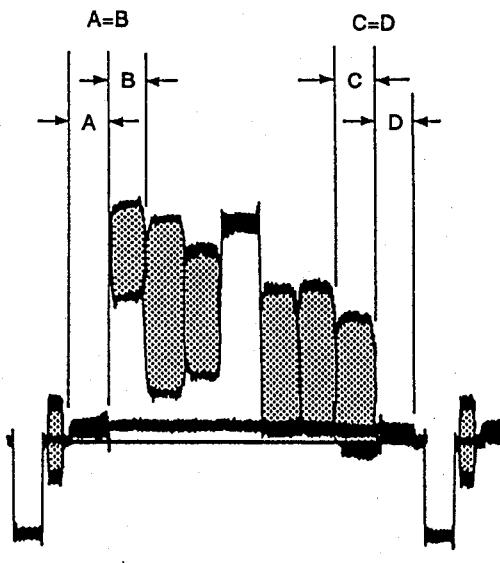

Fig. 7-12.

Checking with the oscilloscope

1. H cycle

2. V cycle

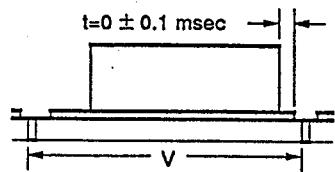

Fig. 7-11.

16. IRIS IN/OUT adjustment

Subject	White pattern standard picture frame
Measurement Point	Lower 2 digits of the data of the page A displayed
Measuring Instrument	
Adjustment Page	F
Adjustment Address	44 (IRIS IN) 45 (IRIS OUT)

Adjusting method:

Order	Page	Address	Data	Procedure	Conditions
1	6	00	01	Releasing of protect.	
2	6	02	03	Setting of HALL DATA display mode.	
3	6	01	0B	Press the PAUSE button. (Setting the ND 0.8 shutter mode)	
4				Read the lower 2 digits of the page A display data, and take it as D44.	ND 0.8 shutter mode
5	F	44		Adjust the data to D44 (obtained at step 4) with the PLAY and STOP buttons.	
6	F	44		Press the PAUSE button.	
7	6	01	09	Press the PAUSE button. (Setting the ND 0.5 shutter mode)	
8				Read the lower 2 digits of the page A display data, and take it as D45.	ND 0.5 shutter mode
9	F	45		Adjust the data to D45 (obtained at step 8) with the PLAY and STOP buttons.	
10	F	45		Press the PAUSE button.	

Processing after Adjustments:

Order	Page	Address	Data	Procedure	Conditions
1	6	02	00	Releasing of HALL DATA display mode.	
2	6	01	01	Press the PAUSE button. (Releasing the ND 0.5 shutter mode.)	

17. Max gain adjustment (VC-128 board)

Subject	Color bar standard picture frame		
Measurement Point	Pin 10 of CN651 (CAM Y)		
Measuring Instrument	Oscilloscope		
Adjustment Page	F		
Adjustment Address	73 (AE MIN L)		
Specified Value	$A=520 \pm 20 \text{ mV}$		

Adjusting method:

Order	Page	Address	Data	Procedure	Conditions
1	6	00	01	Releasing of protect.	
2	6	01	19	Press the PAUSE button. (Max gain adjustment mode)	
3	F	73		Change the data with the PLAY and STOP buttons, and adjust the CAM Y signal level (A) to the specified value.	MAX GAIN adjustment mode
4	F	73		Press the PAUSE button.	

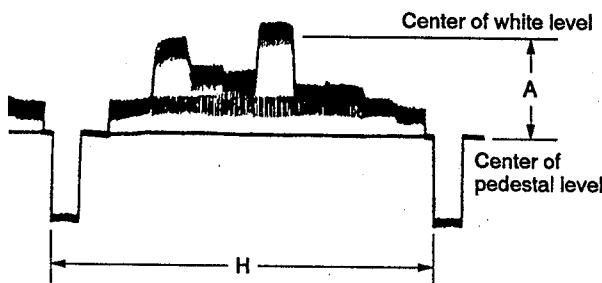

Fig. 7-15.

Processing after Adjustments:

Order	Page	Address	Data	Procedure	Conditions
1	6	01	00	Press the PAUSE button. (Releasing the max gain adjustment mode)	

18. Pre-white balance adjustment

Subject	White pattern standard picture frame
Measurement Point	Video output terminal
Measuring Instrument	Vectorscope
Adjustment Page	F
Adjustment Address	3E (R CONT REF), 3F (B CONT REF)
Specified Value	The center of the white luminance point should be within the circle with a 1 mm diameter which centers around the origin.

Adjusting method:

Order	Page	Address	Data	Procedure	Conditions
1	6	00	01	Releasing of protect.	
2	6	01	0F	Press the PAUSE button. (Setting the WB 3200K preset mode)	
3	F	3E 3F		Change the data alternately, and coincide the white luminance point with the origin. Before changing the address, press the PAUSE button.	WB 3200K preset mode
4	F	1A	FA	Press the PAUSE button.	
5	F	1B	F1	Press the PAUSE button.	

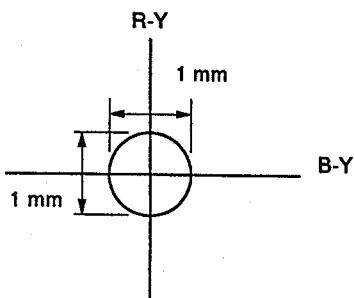

Fig. 7-16.

Processing after Adjustments:

Order	Page	Address	Data	Procedure	Conditions
1	6	01	00	Press the PAUSE button. (Releasing the WB3200K preset mode.)	

Related Adjustments:

19. Auto white balance reference data input

Subject	White pattern standard picture frame
Adjustment Page	F
Adjustment Address	38 (R3200H), 39 (R3200L), 3A (B3200H), 3B (B3200L), 3C (G3200H), 3D (G3200L)

Adjusting method:

Order	Page	Address	Data	Procedure	Conditions
1				Turn off/on the main power supply (6.3V).	
2	6	00	01	Releasing of protect.	
3	6	11		Check that the data is 00. (Display indicating that auto white balance reference data can be input)	
4	6	01	11	Press the PAUSE button. (Auto white balance reference data input preparation mode)	
5	6	01	0D	Press the PAUSE button. (The auto white balance reference data input will be executed and the data input automatically to addresses 38 to 3D of page F.)	
6	6	11		Check that the data is 01. (Display indicating that the auto white balance reference data input completed)	

Processing after Adjustments:

Order	Page	Address	Data	Procedure	Conditions
1	6	01	00	Press the PAUSE button. (Releasing the auto white balance reference data input mode)	
2				Perform "Auto White Balance Adjustment".	

Related Adjustments:

"Auto White Balance Adjustment".

20. Auto white balance adjustment

Subject	White pattern standard picture frame	
Filter	Filter C14 for color temperature correction	
Measurement Point	Check with the 4 digits of the data of page A displayed.	
Measuring Instrument		
Adjustment Page	F	
Adjustment Address	40 (NORM R), 41 (NORM B)	
Specified Value	R ratio $2A80 \pm 40$ B ratio 6080 ± 40	

Note: Perform this adjustment after "Auto White Balance Reference Data Input".

Adjusting method:

Order	Page	Address	Data	Procedure	Conditions
1	6	00	01	Releasing of protect.	
2	F	6B	D0	Press the PAUSE button. (Setting the auto white balance adjustment mode)	
3	6	02	04	Setting of R ratio display mode.	
4	F	40		Change the data with the PLAY and STOP buttons, and adjust the R ratio data of the page A display to the specified value.	R ratio display mode Perform this by switching pages A and F.
5	6	02	05	Setting of B ratio display mode.	
6	F	41		Change the data with the PLAY and STOP buttons, and adjust the B ratio data of the page A display to the specified value.	B ratio display mode Perform this by switching pages A and F.
7	F	41		Press the PAUSE button.	

Processing after Adjustments:

Order	Page	Address	Data	Procedure	Conditions
1	F	6B	00	Press the PAUSE button. (Releasing the auto white balance adjustment mode)	
2	6	02	00	Releasing of B ratio display mode.	

21. White balance check

Subject	White pattern standard picture frame		
Filter	Filter C14 for color temperature correction ND filters 1.0 and 0.3		
Measurement Point	Video output terminal		
Measuring Instrument	Vectorscope		
Specified Value	Fig. 7-17. A to C		

Checking method:

Order	Page	Address	Data	Procedure	Conditions
1				Check that the lens is not covered with either filter.	
2	6	00	01	Releasing of protect.	
3	6	01	0F	Press the PAUSE button. (Setting the WB 3200K preset mode)	
4				Check that the white luminance point is within the circle shown in Fig. 7-17. A. (Setting the indoor white balance mode)	WB 3200K preset mode, no filter
5	6	01	00	Press the PAUSE button. (Releasing WB 3200K preset mode)	
6	F	67	01	Press the PAUSE button. (Setting the auto white balance high speed tracking mode)	
7				Check that the white luminance point is within the circle shown in Fig. 7-17. A.	Auto white balance high speed tracking mode, no filter
8				Place the C14 filter on the lens.	
9				Check that the white luminance point is within the circle shown in Fig. 7-17. B. (Checking the auto white balance outdoor mode)	Auto white balance high speed tracking mode, C14 filter
10				Remove the C14 filter, and place the ND filter 1.3 (1.0+0.3) over the lens.	
19				Check that the white luminance point is within the circle shown in Fig. 7-17. C. (Checking the auto white balance outdoor mode)	Auto white balance high speed tracking mode, ND filter 1.3

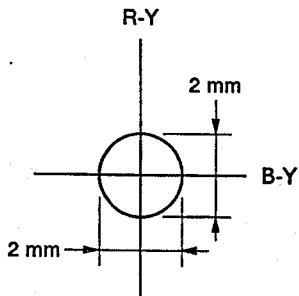

Fig. 7-17. A

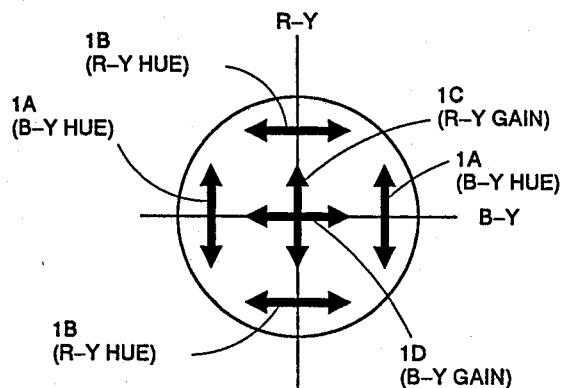

Fig. 7-19. Direction of the Movements of Adjustment Addresses and Luminance Points

Processing after Adjustments:

Order	Page	Address	Data	Procedure	Conditions
1	6	01	00	Press the PAUSE button. (Releasing the WB 3200K preset mode)	
2	6	03	10	Set the normal mode (weighting on mode).	

Related Adjustments:

"Linear matrix adjustment".

23. Linear matrix adjustment

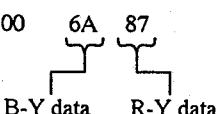

Subject	Color bar standard picture frame
Measurement Point	Filter C14 for color temperature correction
Measuring Instrument	Check with the 4 digits of the data of page A displayed.
Adjustment Page	
Adjustment Address	F
Specified Value	48 (DMAT HUE), 49 (DMAT GAIN)

Note: Before beginning adjustments, check that the color bar chart picture frame is at the position set in "14. Picture frame setting".

Adjusting method:

Order	Page	Address	Data	Procedure	Conditions
1				Remove the filter C14 for color temperature correction.	
2	6	00	01	Releasing of protect.	
3	6	03	00	Setting of weighting off mode.	
4	6	02	02	Setting of color difference data display mode.	
5	F	16	2E	Press the PAUSE button. (Setting the color modulation stop mode)	
6	F	6B	F1	Press the PAUSE button. (Setting the auto white balance all area tracking mode)	
7	2	00	01	Selecting of page 2, category 01.	
8	2	39	01	Setting of data transmission mode for SG.	
9	2	37	C9	} Specifying of position of yellow.	Specifying of position of yellow, no filter
10	2	38	B6		
11	F			Read the R-Y data (Y1) of the page A display. (Note 1)	
12	2	37	59	} Specifying of position of red.	Specifying of position of red, no filter
13	2	38	6D		
14	F			Read the R-Y data (R1) of the page A display. (Note 1)	
15				Cover the lens with the filter for color temperature correction. (Make sure that the picture frame of the color bar chart does not move.)	Specifying of position of yellow, C14 filter
16				Read the R-Y data (R2) of the page A display. (Note 1)	
17				Convert Y1, Y2, R1, R2 to decimal numerals to obtain Y1', Y2', R1' and R2'. (Refer to Table 7-7 "Hexadecimal-Decimal Conversion Table")	
				Calculate X1' from the following equations (decimal numeral calculation). $X1' = Y2' - Y1'$	

Note 1: 2 digits of 4 digit number displayed of the page A.
Y1, Y2, R1, and R2 are all above 80.

(Example) 00 6A 87

Order	Page	Address	Data	Procedure	Conditions								
18				Calculate D48 from the following table. (D48 is a hexadecimal numeral)									
				<table border="1"> <thead> <tr> <th>X_{1'} value</th> <th>D₄₈</th> </tr> </thead> <tbody> <tr> <td>-1 ≤ X_{1'} ≤ 1</td> <td>0F</td> </tr> <tr> <td>X_{1'>1}</td> <td>1F</td> </tr> <tr> <td>X_{1'<-1}</td> <td>FF</td> </tr> </tbody> </table>	X _{1'} value	D ₄₈	-1 ≤ X _{1'} ≤ 1	0F	X _{1'>1}	1F	X _{1'<-1}	FF	
X _{1'} value	D ₄₈												
-1 ≤ X _{1'} ≤ 1	0F												
X _{1'>1}	1F												
X _{1'<-1}	FF												
19	F	48		Adjust the data to D48 (obtained at step 18) with the PLAY and STOP buttons.									
20	F	48		Press the PAUSE button.									
21				Calculate X _{2'} from the following equations (decimal numeral calculation). X _{2' = R2' - R1'}									
22				Calculate D49 from the following table.									
				<table border="1"> <thead> <tr> <th>X_{2'} value</th> <th>D₄₉</th> </tr> </thead> <tbody> <tr> <td>X_{2' ≥ 0}</td> <td>00</td> </tr> <tr> <td>0>X_{2' ≥ -1}</td> <td>01</td> </tr> <tr> <td>-1>X_{2'}</td> <td>02</td> </tr> </tbody> </table>	X _{2'} value	D ₄₉	X _{2' ≥ 0}	00	0>X _{2' ≥ -1}	01	-1>X _{2'}	02	
X _{2'} value	D ₄₉												
X _{2' ≥ 0}	00												
0>X _{2' ≥ -1}	01												
-1>X _{2'}	02												
23	F	49		Adjust the data to D49 (obtained at step 22) with the PLAY and STOP buttons.									
24	F	49		Press the PAUSE button.									

Processing after Adjustments:

Order	Page	Address	Data	Procedure	Conditions
1	F	6B	00	Press the PAUSE button. (Releasing the auto white balance all area tracking mode)	
2	F	16	2C	Press the PAUSE button. (Releasing the color modulation stop mode)	
3	6	02	00	Releasing of color difference data display mode.	
4	6	03	10	Setting of normal mode (Weighting ON mode).	

24. Initializing the Page F Data

Note: If the page F data has been initialized, all the adjustments for the camera section must be performed again.

Initializing method:

Order	Page	Address	Data	Procedure	Conditions
1				Turn OFF/ON the main power supply (0.0V).	
2	6	00	01	Release the protect.	
3	6	01	2F	Press the PAUSE button. Initialization of the data of page F.) Initialization of the data of addresses 01 to EF on page F.	
4	6	11		Check that the data is 01. (Completion of initialization will be indicated.)	

Note: Initialize page F only when the non-volatile memory (IC651, 901 on the VC-128 board, EEPROM) has been replaced.

Processing after initializing

Order	Page	Address	Data	Procedure	Conditions
1	6	01	00	Press the PAUSE button. (Release of initialization mode.)	
2				Perform "Page F data modification", and perform all the adjustments for the camera section.	

Related adjustments

All camera section adjustments except the "28 MHz origin oscillation adjustment".

25. Initializing the Page D Data

Initializing method:

Order	Page	Address	Data	Procedure	Conditions
1	1	02	01	Turn OFF/ON the main power supply. Check that the data of address 03 becomes 00.	
2	1	03		Press the PAUSE button.	
3				Check that the data is 01. (Completion of initialization will be indicated.)	

Note: Initialize page D only when the non-volatile memory (IC901 on the VC-128 board, EEPROM) has been replaced.

Processing after initializing

Order	Page	Address	Data	Procedure	Conditions
1	1	02	00	Press the PAUSE button. (Release of initialization mode.)	
2	1	00	01	Release the protect. (Page D)	
3				Perform "Page D data modification". <ul style="list-style-type: none"> • Address Data 12 00→02 14 00→04 • Write the data of addresses 9F to A2 on page F onto addresses 56 to 59 on page D. (Data for the position preset function operation.) • Write the data of addresses 1F to 2E on page F onto addresses E0 to EF on page D. (Data for CCD fault correction.) • After completing the above, adjust the Y and C composite video signals.
